**NOTE**

- To prevent a malfunction caused by noise, separate the signal cables more than 10cm (3.94inches) from the power cables. Also separate the main circuit wire of the input side and the output side.
- After wiring, wire cutoffs must not be left in the inverter. Wire cutoffs can cause an alarm, failure or malfunction. Always keep the inverter clean. When drilling mounting holes in an enclosure etc., take care not to allow chips and other foreign matter to enter the inverter.
- The output of the single-phase power input specification is three-phase 200V.
